

SENKI™

Mobile Security System

overview **Background of Senki Pty Ltd**

Senki Pty Ltd has been associated with the Construction Industry since 1983. We have 15 years experience with electronic alarm systems and CCTV.

Based out of Coffs Harbour, in the Mid North Coast, our clients span throughout New South Wales.

Major projects Senki have been associated with include; Blue Circle Southern Cement Limited, J Blackwood and Sons Limited, Boating Camping Fishing, Abi Group, Reece Plumbing, Australia Post and the Bank of Bendigo to name a few.

What is the Mobile Security System?

We understand the need to provide security for such goods as PC items ie; lights, wall oven, hotplate, baths, tapware, tiles etc, following delivery to site after "lock up" stage has been established. Too often they can be found missing the following day.

The Senki™ Mobile Security System (MSS) (patent pending) is the smartest move you can make to protect these items. With advanced and reliable technology the MSS has you covered.

Although it is highly sophisticated, the Senki™ MSS is remarkably simple to operate, securing your room with push button ease.

The Senki™ MSS is one of the best investments you can make.

How it works?

The system can be "Armed/Disarmed" via a two-button radio remote transmitter, which provides a visual status of the alarm condition. The Pet adaptive dual technology detectors provide up to 360 degree detection against intruders.

Upon triggering the alarm a 106Db screamer will sound for a predetermined period and the strobe light will continue to flash until the control panel is turned off via the radio remote transmitter.

With the Senki™ MSS's built-in digital communicator, alarms can be immediately reported via the SED-62/3G GPRS to a Central Monitoring Station, which is staffed 24 hours a day or send an SMS text message of the alarm condition to a site Supervisor or nominated personal.

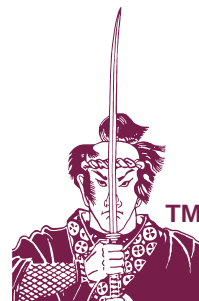

**Guarantees performance you can rely on
and the security your business deserves**
